ABOUT

Backend (ex-full-stack) engineer with 8+ years of commercial experience. Worked both remotely and on-site in teams of 5-20 people. I can take a short business request and deliver the full development cycle: from creating tickets to production release with CI/CD and monitoring. I focus on building scalable and fault-tolerant systems.

I have experience as a tech lead: managed tasks, drove proactive improvements in engineering culture, and helped the team grow professionally. **I also led a non-profit project** to help people with serious illnesses, coordinating a distributed volunteer team.

In addition, **I shared knowledge as a speaker** at a student IT conference and **taught programming courses** for students and beginners. I value teamwork, take initiative, and continuously invest in my professional growth.

SKILLS

Backend: Java, Kotlin, Go, Python, Gradle / Maven, Spring Boot, Django REST Framework, Multithreading, Concurrency, PostgreSQL, ClickHouse, Redis, RabbitMQ, Kafka, Microservices, CAP, ACID, BASE, Grafana Stack, Prometheus, Alerting, Logs, Tracing, OpenTelemetry, REST, gRPC, OpenAPI / Swagger, JWT, Testing, Security, OWASP, Optimization, Profiling

Frontend: JavaScript, TypeScript, React, Next.js, Redux, Webpack, Vite, Playwright, Figma

Other: Git, nginx, Docker, Docker Compose, K8s, GitHub, GitLab, CI/CD, Bash

EXPERIENCE

DIABOLOCOM, 11/2021 — PRESENT

Developed **a cloud-based CRM for contact centers**. Worked with the team **to maintain 5 microservices**, several of which processed most of the requests from the admin panel and other services. Worked as **an on-call engineer**, responding to production issues and incidents, while also participating in the end-to-end cross-team feature development cycle. Increased test coverage across multiple services by writing **around 800-1000 tests**. Introduced a wide range of **technical and business metrics**. Continuously improved **CI/CD pipelines**.

Stack: Java, Kotlin, Spring Boot, PostgreSQL, Redis, RabbitMQ, Go

7BITS, 09/2017 — 11/2021

Went through a 1-year training course followed by a 3-month internship, after which worked in different teams on several external and internal projects, discussing requirements with the business and participating in the full development cycle. **Managed** one of the projects. **Taught programming courses** for students and beginners.

Stack: Java, Kotlin, Spring Boot, PostgreSQL, ClickHouse, JavaScript, TypeScript, React

EDUCATION

OMSK STATE TECHNICAL UNIVERSITY — MASTER, 2019 — 2021

Software Engineering (Software Development for Automated Systems)

OMSK STATE TECHNICAL UNIVERSITY — BACHELOR, 2015 — 2019

Software Engineering (Software Development for Automated Systems)

ADDITIONAL EXPERIENCE

2017 — PRESENT

Developed several Telegram bots in Kotlin, Go, and Python for personal use as well as for other people and organizations. Also **built websites** for a museum exhibition ([GitHub](#)) and a dog grooming studio.
