

Ruslan Khasanshin

Senior Software Engineer — Product & Platform

Russia · UTC+6 · Remote

r.m.khasanshin@gmail.com · hu553in.su · [GitHub](#) · [LinkedIn](#)

Summary

Senior software engineer with 8+ years of experience shipping and operating products across insurance, travel, contact-center SaaS, and creator tooling. Takes ambiguous or unfinished work from domain modeling and architecture through implementation, rollout, observability, and ongoing operation. Backend-heavy but end to end: production depth in Go and Java/Kotlin, four years of commercial React/TypeScript full-stack work, and current independent product and developer-tooling work in TypeScript and Python.

Core Skills

- **Product & frontend:** TypeScript, JavaScript, React, Next.js, Node.js, Bun
- **Backend & data:** Go, Java, Kotlin, Python, PostgreSQL, ClickHouse, Redis, Kafka, gRPC/Protobuf, REST, event-driven architecture
- **Platform & operations:** OpenTelemetry, Prometheus, Grafana, Docker, Kubernetes, GitLab CI, GitHub Actions, Terraform, Ansible, dependency security

Experience

QIC digital hub — Senior Backend Engineer

Nov 2025–Present · Remote

- Took an incomplete Go rewrite of QIC's motor-insurance backend through a phased production launch, completing and stabilizing quote, pricing, payment, policy, document, API-gateway, and external-integration flows.
- Designed and implemented the observability layer of a shared Go platform library adopted across 25 backend services: structured logging and sensitive-data masking, OpenTelemetry tracing across HTTP, gRPC, Kafka, and workers, and common Prometheus instrumentation.
- Built Grafana dashboards and 30+ operational alerts with end-to-end session and trace correlation, service and flow context, direct diagnostic links, and continuous alert-noise reduction.
- Personally raised automated test coverage across 10+ services using unit and Testcontainers-based integration tests; established shared CI verification and 50%+ coverage baselines across the core backend estate, with many critical services reaching 70–90%+.
- Rolled out Renovate and govulncheck across 25 repositories and coordinated Snyk and Trivy gates with Operations, bringing 90%+ of core services to current dependencies without known High or Critical dependency findings.
- Co-owned the backend launch of QIC Travel with one other engineer, delivering events and experiences, hotel search and booking, Xeni and Platinumlist integrations, synchronization pipelines, webhooks with an outbox pattern, and cross-service request correlation.

Noveo — Senior Java Developer

Nov 2021–Nov 2025 · Remote

- Built and operated five Java/Kotlin microservices powering most admin-panel traffic and inter-service communication for a cloud contact-center CRM; participated in on-call and cross-functional feature delivery.
- Reduced a frequently called, filter-heavy API from approximately 800 ms to 150 ms through profiling, query optimization, and service-level changes.
- Added approximately 800–1,000 automated tests and introduced technical and business metrics, CI/CD quality gates, and OpenAPI-based client/server generation.
- Acted as tech lead for five engineers during the final 18 months, leading refinement, onboarding, mentoring, and delivery improvements.

7bits — Full-Stack Software Engineer

Sep 2017–Nov 2021 · Omsk, Russia

- Delivered external and internal products across the full development cycle with Java/Kotlin/Spring and React/TypeScript, from requirements and domain modeling through implementation, deployment, and production support.
- Led one project and taught programming courses for students and beginners.

Selected Product

[voomy](#) — Independent Product

Mar 2026–Present

- Building a pre-launch bilingual creator platform for video, subscriptions, paid access, discovery, community, and moderation.
- Own the domain model, architecture, implementation, CI, and operations across Next.js and TypeScript, PostgreSQL and Drizzle, authentication, S3-compatible storage, transactional email, and OpenTelemetry; develop product vision, design, and user workflows together with my wife.

Writing & Speaking
